

Get connected to resources to help you get the most out of your healthcare dollars

Connect with a Healthy Life Navigator (HLN) as a resource for cost and quality information for high costs medical services to help you and your family get the most out of your healthcare dollars.

An HLN can help you find quality in-network surgeons, providers, or hospitals. In addition, you can get cost estimates for high-cost procedures. Some examples are open heart surgery, gallbladder surgery, hernia, spinal fusion, organ transplant, prostatectomy, partial colectomy, pacemaker implant, exploratory laparotomy (stomach) skin graft, amputation, thyroidectomy, artificial limb replacement, hip or knee replacement.

An HLN can also help explain how your health plan works and pays.

If you want to learn how to research cost and quality yourself, the HLN can give you information on how do it.
